

# Calendar integrations in Reschedule

Last Modified on 02/26/2019 10:52 am EST

Reschedule seamlessly integrates with the two main calendar servers on the market: Microsoft Exchange or Office 365, and Google G Suite (formerly Google Apps).

The calendar integration enables Reschedule to retrieve busy time from the Interviewers' and resources' calendars, and schedule Interviews with them when they are available.

Reschedule can integrate with your Microsoft Exchange or Office 365 using four different connection methods. You can choose the right method for your organization based on your organization's security policy. [Learn more about Reschedule integration with Microsoft Exchange or Office 365](#)

## G Suite

Users in Reschedule can connect their Reschedule account to their organization's G Suite account. The integration with G Suite uses the OAuth2 authentication method, and connects with a secure Google token. [Learn more about Reschedule integration with G Suite](#)
