

# Third-party integrations in Reschedule

Last Modified on 02/18/2019 7:26 am EST

In Reschedule, we understand that most of the recruiting team's work is performed in the Applicant Tracking System (ATS). That's why we've invested great effort in integrating Reschedule with Greenhouse ATS, ensuring a better experience, and saving you even more time.

By integrating Greenhouse with Reschedule, you can get more out of your Greenhouse platform. The Reschedule interview scheduling process can be initiated directly from Greenhouse by a click of a button. Reschedule fields are automatically prepopulated with data from Greenhouse, eliminating the need to enter information twice. When a schedule is selected, Reschedule adds an event in the interviewers' calendar with a link to the interview kit and scorecard in Greenhouse. Once the scheduling process is done, the results are synced back to Greenhouse, updating the interview details for the candidate. Together, Reschedule and Greenhouse make interview scheduling a breeze.
